

Better spacing is easier for many gifted children with written output disorders if they use coloured lines.

The following pages have green solid lines which mark the centre of the writing space. These lines are $\frac{1}{4}$ inch spacing. There are also pages with a square grid to help children space their letters and numbers.

To try these pages with your children, print either page 2 (lines only) or page 3 (lines with grid). Please let us know if these pages help your children by emailing Gifted Canada via David_Shepherd@telus.net. Any other suggestions that have helped gifted children with written output disorders are gratefully received for publication on the gifted canada website (www3.telus.net/giftedcanada).
